

a Shared evaluation embedding

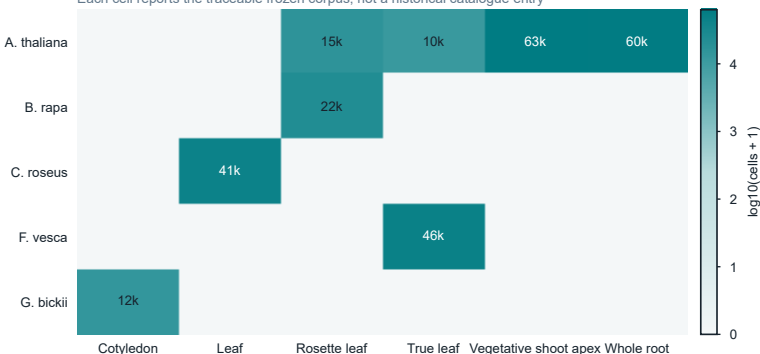

3,964 cells across eight held-out species

**b Ontology states in the same coordinates**

State structure is separated from species identity

**c Frozen corpus profile****d Training data are distributed across species and organs**

Each cell reports the traceable frozen corpus, not a historical catalogue entry

**e A protocol-aware annotation contract**

The model records assumptions that change the meaning of an annotation result

The frozen profile, inner-fold choice, target support and deployment head are never presented as one metric.
