

a Held-out reference identities*C. roseus*: 256 leaf cells

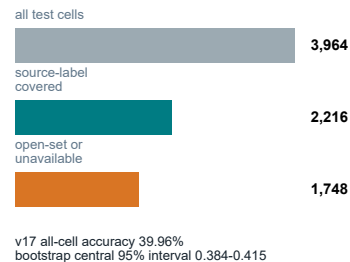

● Idioblast cell ● Phloem parenchyma
 ● Leaf epidermis ● Unknown
 ● Meristematic cell ● Vascular tissue
 ● Mesophyll

b Strict zero-shot outputs

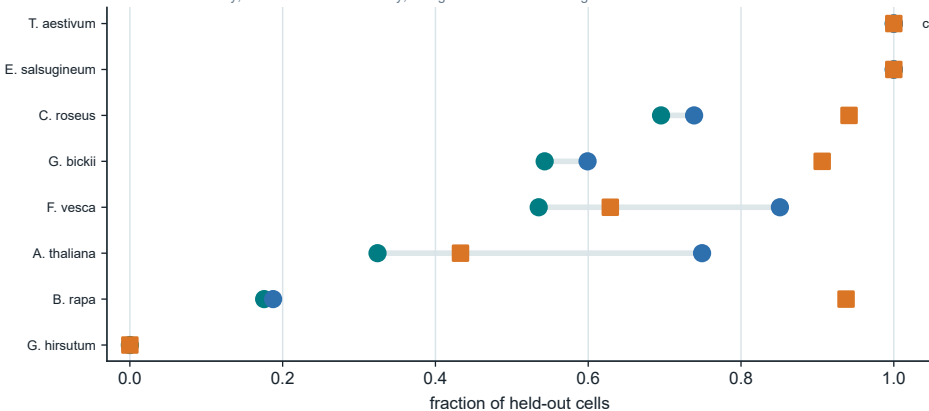

Target labels never enter fitting or inner-fold selection

**c Primary denominator remains intact**

A coverage-aware report keeps open-set cells visible

**d Strict transfer is heterogeneous across all eight held-out species**

Teal: all-cell accuracy; blue: conditional accuracy; orange: source-label coverage

**e Context-aware calibration improves the frozen transfer panel**

Same cells and 55.90% coverage; global sensitivity analysis, not the nested primary result
