

Wheat root: allopolyploid transfer resolves the locked benchmark

GSE270342 | 1,433 physically locked cells | identical evaluation barcode

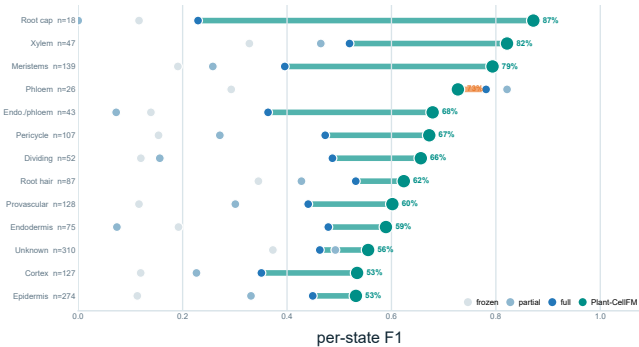

a A/B/D orthology bridge and locked-cell contract

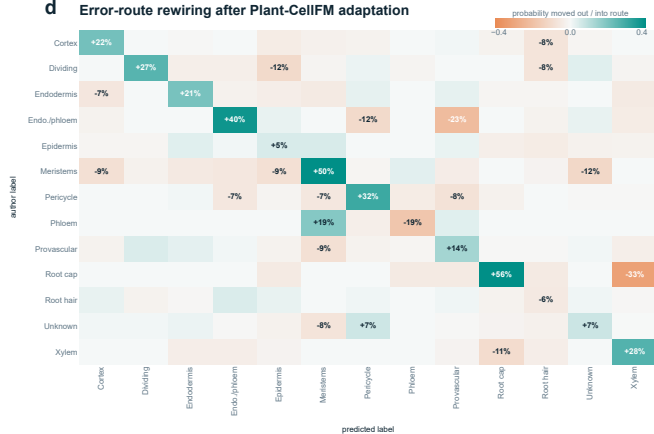

b Matched routes converge on 66.6% macro-F1

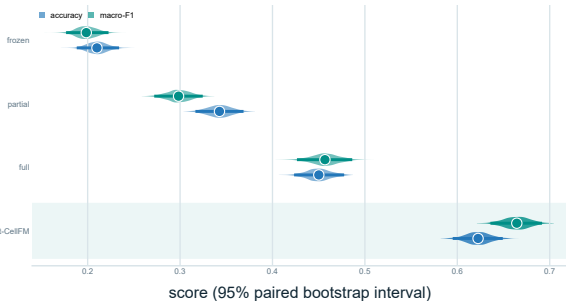

c State-wise recovery across four model routes

d Error-route rewiring after Plant-CellFM adaptation

e Paired bootstrap uncertainty

f Gain is broad across state support
