

a One shared object, mapping and locked test

GSE270342 and 1,433 Plant-CellFM locked test barcodes are held constant

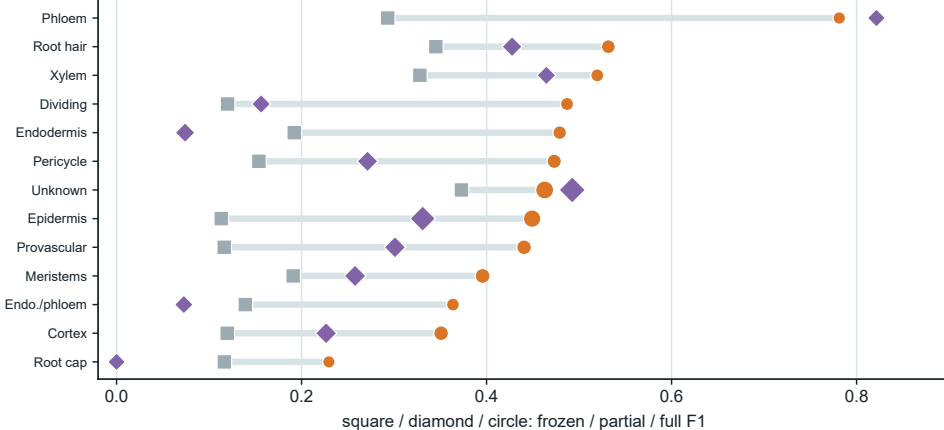

Partial and full runs select epoch on validation macro-F1 only, then replay their locked predictions exactly.

c Full adaptation changes the per-class profile beyond partial adaptation

Point area is locked-test support; all 13 author labels and exact F1 values are in source data

d Comparator boundary

A replayed adaptation reference, not a universal ranking

- shared object, mapping and locked test
- official 431 MB checkpoint; clean state load
- full 107.3 M trainable parameters + head
- replay partial and full predictions reproduced
- not claimed independent, strict or compute-matched rank
