

a A frozen model partitions a label-free external root matrix into 13 predicted states

GSE152766 / GSM4626007; 6,566 cells; colours are model outputs, never supplied labels

Embedding coordinates are from the frozen 256-dimensional cell representation.

b Every output state and confidence remains inspectable

Counts are predictions, not a hidden external ground truth

c Fixed markers support five expected groups

Biological coherence, not an external accuracy estimate

expected group minus other groups (mean log1p expression)

d Scope

Useful biology, bounded claim
