

a

Blind external root inference resolves a structured cell-state manifold

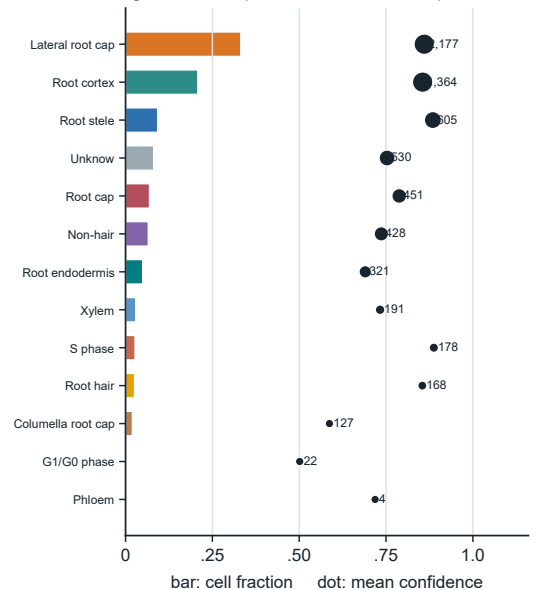

GSE152766 / GSM4626007; 6,566 cells, label-free input not listed in the frozen v4 corpus profile

UMAP of frozen 256-dimensional model embeddings; colours are model predictions, not supplied labels.

b

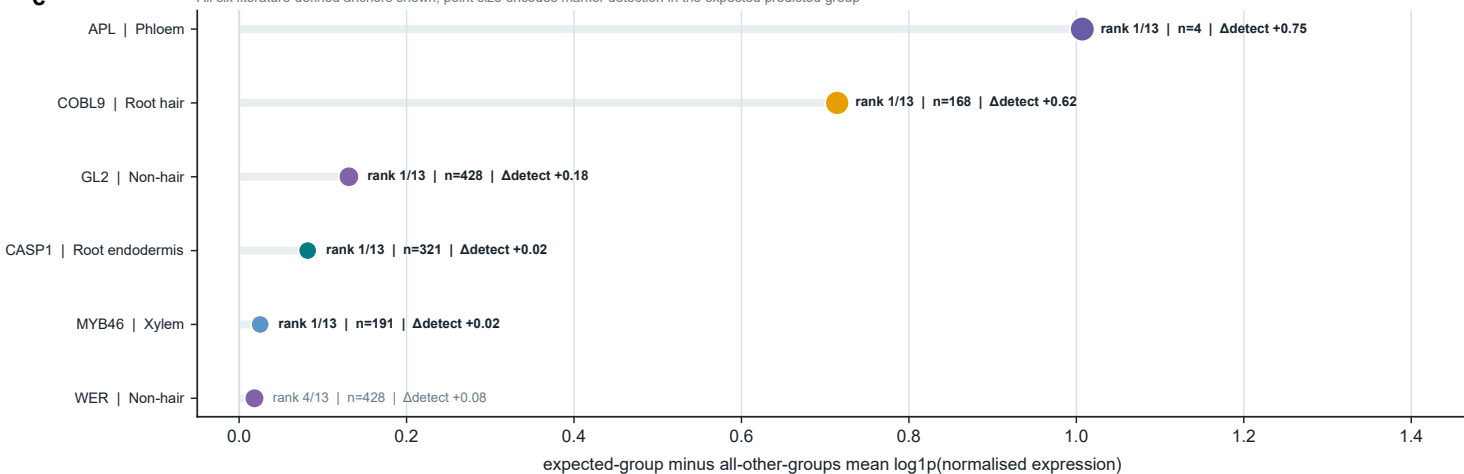

Composition and confidence retain all 13 output states

c

Five of six fixed canonical markers peak in their corresponding predicted group (5/6)

All six literature-defined anchors shown; point size encodes marker detection in the expected predicted group

No expert cell-type labels were present in this GEO matrix: this is a blind-inference and marker-coherence case, not an accuracy estimate or external model ranking.
